Lower Standard - Written Examination, Paper - I
Translation from English into a Language Chosen
(Without Books)

Time: 3 Hours

Marks: 100

Global warming is a term almost everyone is familiar with. But, its meaning is still not clear to most of us. So, Global warming refers to the gradual rise in the overall temperature of the atmosphere of the Earth. There are various activities taking place which have been increasing the temperature gradually. Global warming is melting our ice glaciers rapidly. This is extremely harmful to the earth as well as humans. It is quite challenging to control global warming; however, it is not unmanageable. The first step in solving any problem is identifying the cause of the problem. Therefore, we need to first understand the cause of global warming that will help us proceed further in solving it. In this essay on Global warming, we will see the causes and solutions of Global Warming.

The greenhouse effect is a natural phenomenon. The main causes of global warming are: massive use of fossil fuels, exploitation of forests, Intensive farming with plant protection products and fertilizers, waste management methods like landfills and incineration which emit greenhouse and toxic gases, mining and metallurgical industries accounts for 5% of all greenhouse gas emissions and over consumption is responsible for the overexploitation of natural resources and emissions

The ways to reduce global warming are: Usage of renewable energies like solar, wind, and biomass and geothermal in place of fossil fuels, reducing over consumption of water, promoting public transportation, carpooling, but also electric and hydrogen mobility, can definitely help reduce CO₂ emissions, stopping massive deforestation as well as making agriculture greener, adopting responsible consumption of food (particularly meat), clothing, and cosmetics or cleaning products. Last but not least, recycling is an absolute necessity for dealing with waste.
